

Astreum: A Next Generation Blockchain for Fully Distributed Digital Services

Roy R. O. Okello, Stellar Labs

Astreum is a blockchain platform designed for fully distributed digital services, addressing challenges in storage, computation, and networking. It offers perpetual storage and supports both encrypted and verifiable applications, allowing users to manage data securely while verifying outputs. By integrating data, computation, and networking, Astreum aims to provide a scalable environment for diverse digital services, preserving privacy and security as essential principles.
